

Facebook (25 Points)

By using your imagination and your design skill, we need you to create a project like Facebook that must include the following:

- 1- User create an account. (2 points)
- 2- User login to his/her account and edit his/her profile (profile image, first name, last name, city, country, email, mobile). (2 points)
- 3- User login to his/her account and write posts in his/her profile. (2 points)
- 4- User can search for other users by email or mobile, and after that user can send friend requests to other users. (2 points)
- 5- User can accept or reject the friend request. (2 points)
- 6- User can access his/her friends' profiles and see their posts. (2 points)
- 7- User can like and dislike his/her friend's posts and also write comments. (2 points)
- 8- User can be able to restrict some of his own posts to not be seen by anyone. (2 points)

Please note that you are not allowed to use a built-in template, which means that you must create the template by yourself, and don't worry because we don't need a perfect template, we just need a nice one. (4 points)

Finally, each team member will be asked a question on Asp.net. (5 points)
